Production Design at AFTRS

Australian Film Television
and Radio School

The Production Designer articulates the visual framework for the entire film. All parts should be working within that framework.

It is a holistic based design discipline that supports visual story telling. It engages issues of psychological and aesthetic perceptions of images, space, colour, texture and light that are used to create expressive designs and environments that support a story world.

– Wynn Thomas –

SEMESTER ONE

Foundation skill building:

- Elements & principles of design
- Colour Theory
